

MGM Brakes

A Division of Indian Head Industries, Inc.

PRODUCT BULLETIN

SUBJECT: TYPE 24 LONG STROKE DIAPHRAGMS

There has been some confusion about part numbers for the Type 24 long stroke diaphragm.

Any MGM part number 8017_41 diaphragm can be used in a type 24 long stroke (2.50 inch) brake actuator. The fifth digit of the number is used for MGM's internal tracking and should not concern the customer.

MGM's 8017241 diaphragm is recommended for use in Type 24 "conventional" (2.25 inch) brake actuators.

All MGM diaphragms meet the high standards for performance and reliability that you have come to expect from MGM Brakes.

Of course the above applies only to MGM brand diaphragms, which can be easily identified by the MGM logo in the center of the diaphragm. The customer should consult the manufacturer for information concerning other brand diaphragms.

If there are any questions concerning diaphragms or any other brake actuator problem, please do not hesitate to call Customer Service at (704) 547-7411 or fax at (704) 547-9367.
