

# MGM Brakes

## AIR DISC BRAKE ACTUATORS - **BUILT TO LAST**

**Reliable, long-life braking for every heavy-duty application.**

**CSB**

### CSB - Service Chamber

- Heavy-gauge formed steel components for long service life
- Durable epoxy coating provides reliable corrosion protection
- Engineered to perform in the toughest, harshest environments
- Enhanced protection against caliper moisture intrusion

**TRB**

### TRB - Double Diaphragm Chamber

- “External Breather-Tube” vents air from the protected service chamber area
- Prevents entry of liquid and solid contaminants that can cause premature spring brake failure
- Heavy-gauge formed steel mounting base for durability in tough operating environments
- Provides added protection against caliper moisture intrusion

**MJB**

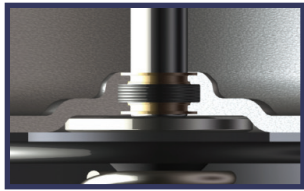

### MJB - Piston Chamber

- Compact design with smaller diameter and shorter overall height
- Delivers greater stopping and parking force/output than similar-size double diaphragm actuators
- MGM patented “Dual-Thread Release Bolt” allows installation in tight spaces where typical release bolts won’t fit
- Built for dependable, trouble-free performance in severe operations and environments
- Provides added caliper moisture intrusion protection

# BUILT SAFE...BUILT STRONG...BUILT HERE

**FORM 5080**

# EXCLUSIVE FEATURES

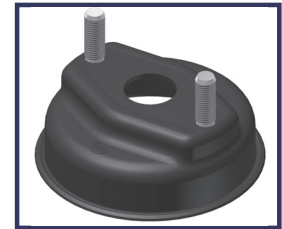

**Center-Seal - TRB Models**

Exclusive multi-lip seal: low-temp rubber with nylon guides for long-lasting leak protection.

**Dual-Thread Release Bolt - MJB Models**

"Dual-Thread" manual release bolt: Patented design—max release, minimal space.

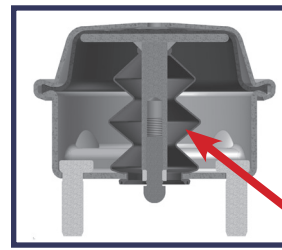

**Non-Pressure Housing**

Rugged diamond heavy gauge steel base: epoxy-coated, welded mounting studs for total corrosion protection.

**External Breather-Tube**

Protected venting: prevents contaminants from entering and damaging the spring brake chamber.

**Internal Dust Boot**

Durable internal dust boot: seals out contaminants to protect air disc brake components.

**Internal Dust Boot**

Air disc brakes are hard to inspect and diagnose. The MGM e•STROKE® brake monitoring system detects issues that visual checks can't, keeping your brakes safe and reliable.
